Company Introduction

The Korea Atomic Energy Research Institute (KAERI), which was established in 1959, is the first science and technology research institute in Korea to be mandated to achieve energy self-reliance through nuclear technology. Since its establishment, KAERI has played a leading role in the advancement of science and technology as well as national economic growth by producing landmark achievements during the 60-year history of nuclear energy development.

Major Products and Services

KAERI has produced remarkable achievements during its 60-year history of nuclear energy development. Such achievements include the self-reliance of the NSSS design of the Korean Standard Nuclear Power Plant, the localization of both CANDU and PWR fuels, and the indigenous design of the HANARO research reactor. KAERI has been successful on the world stage too. Signing on MOU with Saudi Arabia to strengthen partnership in SMART reactor technology and human capacity building in nuclear sector and the successful completion of the Jordan Research and Training Reactor (JRTR) construction project are examples of our global accomplishments.

Major Business Records, Partners and Markets

KAERI continues to cooperate with the international community to promote peaceful uses of nuclear energy and nuclear nonproliferation. Currently KAERI is in cooperation with 83 agencies of 38 countries, covering all the continents and international organizations and forums. This international cooperation network is and will be valuable asset of KAERI to realize its dream to the world. KAERI can serve as a role model to newcomer countries.
